

# SARATHLAL HS

## Front-End Developer

A passionate Frontend Developer with expertise in JavaScript, React, MySQL and Node Js. With a keen eye for design and a commitment to creating seamless user experiences, I bring ideas to life through clean and efficient code. My goal is to bridge the gap between aesthetics and functionality, crafting web and mobile applications that captivate users. Let's connect and turn your digital vision into reality.

RR Donnelley India Outsource pvt Ltd

### Document Specialist

Creating and Editing HTML Documents of Multinational companies using Dreamviewer and HTML. Coordinating employees to delivering documents to client ontime. Ensure documents adhere to company style guides, templates, and formatting standards.

## Projects

### Bahuji - E Commerce Website

The E Commerce Project created with HTML , CSS & JavaScript

### Restaurant Project

The informative website created with HTML ,CSS, and JavaScript

### Online Video Streaming Website

This responsive website created with HTML, CSS & React Js

### Weather App

Weather App shows current temperature of selected cities. This app created using Html, CSS & React js

## Project Details

---

### Bahuji - E Commerce

I developed the interactive e commerce website. That ensured optimal viewing and interaction across various devices, including Desktops and Smartphones, resulting in increased accessibility and user engagement.

### Restaurant Project

I have created this informative website project using HTML, CSS and JavaScript. JavaScript parallel effect gives more attractive scrolling effect.

### Online video streaming website

This Online streaming website project using React. I have used free API for fetching movie data from database. We can play trailers of specific movies when we click on the movie. There is a login page, and signup page for accessing data of movies. Using MySQL, nodeJS I created backend for storing users login credentials and establishing connection with it.

### Weather App

I have created this informative website project using HTML, CSS and JavaScript. Using free API, fetching data and displaying temperature and wind speed of selected cities all around the world.
